

The one thing: what does this product do that no one else does

no one has built a polished, AI-powered, conversational tool that takes a small business owner's actual time and tells them specifically what to delegate, to whom, and in what order - using a real operations framework (the DRIP matrix / Elevate's methodology), not a generic productivity tip.

The "one thing" might be: it turns a messy, overwhelmed week into a clear, ranked list of what to hand off first - in a 10 minute conversation, not a worksheet you have to fill out alone.

The differentiator isn't the framework itself (that exists in books). It's that an AI is doing the categorization *for* the user based on *their* specific answers, conversationally, instead of the user having to **self-categorize on a static PDF**.

Simplest version to test with Cory in two weeks

*Strip it down to: a conversational intake (5 to 8 questions about how Cory spends a typical week + business) that outputs a simple ranked list - here are the 3 to 5 things you should delegate first, and why, based on the **DRIP framework**.*

Just: does the output feel accurate to Cory? **Does it feel like it "gets" her business?** That's the only thing testing.

Constraint - the amount of questions can - brainstorm on good questions - how these models are made

The experience: walk through it

First thing the user sees: probably something simple and warm, not a form. Something like "Let's figure out what's eating your time" - sets the tone that this isn't a survey, it's a conversation.

First question: **should be low-effort and concrete, not abstract**. Not "what are your business goals" more like ***"walk me through what you did yesterday from the moment you started working."***

If this takes 20 minutes, a lot of your target users won't finish it. **5 to 10 minutes feels right for a first version. That's a real constraint on how many questions you can ask.**

What the output looks like: given your customer (not tech savvy, overwhelmed, wants clarity not more to read)- probably not a long report. A short, visual, ranked list feels right. Something like "here are your

top 3 things to delegate this month, here's who should do each one (a VA? an EA? a bookkeeper?), and here's roughly

what it'll cost you to hand it off vs. what it's costing you to keep doing it yourself."

The emotion

Given everything - relief and clarity feel like the two target emotions. Not "wow this is so smart" but "oh... that actually makes sense, I can do that this week." **The win is the user feeling like the overwhelming fog just got organized into 3 concrete next steps.**

Who is the exact user, what do they walk away with

User: **small business owner, 1 to 10 employees, still doing tasks an EA should own, hasn't delegated because they don't know what or how.**

What they walk away with: a short, prioritized list of 3 to 5 tasks to delegate, who should take each one, and a rough sense of the ROI (their time vs. the cost of delegating). Ideally this naturally leads into "and here's

Figure that keeps you in the loop quickly you are winning

what working with an EA like Elevate would look like for this."

Input

- Walk me through a typical week - what are you spending your time day to day
- If I had no tasks to do, how would you spend time to grow your company
- For each thing you mentioned, blockages, how many hours do you spend
- Which of the following can only you handle, or could someone else probably handle
-

Processing

- Takes the user's raw answers what
- Categorize into DRIP quadrant + whatever we think where
- Match each of these to the role type - a direction how

Output

- Ranked the top 5 tasks to delegate, ordered by impact + time – using the DRIP framework
- Who should take it, depending on the ORG
 - Solo - playbook of an AI - that could potentially perform an admin - link outweeds.ca
- A rough if sense the cost/time tradeoff (this is sorting you X hours a week, hiring it out costs roughly y assigning)

CORE - first core output
